

Career Opportunity: Apprentice Calibration Technician

J&J Calibration Service Inc., an accredited Metrology Company, is currently taking applications for our Apprentice Calibration Technician program.

The Apprentice Calibration Technician Program is designed to build the foundation for success in Metrology, the science of measurement, becoming a knowledgeable professional. You will be trained and tested on knowledge and application of company policy, safety, customer service and calibration of instruments. Completion of the program and becoming a Corporate Calibration Technician is dependent on the individual, typically 1-2 yrs.

The Apprentice Technician will report to the Technical Manager. The apprentice will learn calibration and adjustment of measuring instruments found in a variety of industries, including micrometers, torque wrenches, electronics, temperature, and pressure instrumentation. Increase knowledge and skills in the career of metrology through on the job training and company career development courses.
